

ENOSERV PowerBase 7

Tying it all together

ENOSERV PowerBase™ 7 is devised to help your workgroup take control and harness your device data repository to achieve better analysis faster, and with less effort.

More than counting devices... ENOSERV PowerBase is about data collection automation and management and helping to make your workgroup more productive. Recording what has been done is beneficial, but improving it is essential. Unlike other tools that just collect settings out of context, PowerBase integrates into your workflow, enabling you to capture more meaningful data from your activities, helps you understand the testing intelligence behind your activities, and provides the automated tools for you to improve your processes.

Integration & Synchronization

PowerBase gives you the ability to integrate with many industry-standard asset management packages and leverages a powerful spectrum of database systems.

Integrate PowerBase 7 with:

AREVA
ASPEN OneLiner™
CAPE
Cooper
Digital Inspections Cascade™
Doble ProTest™
ENOSERV RTS™

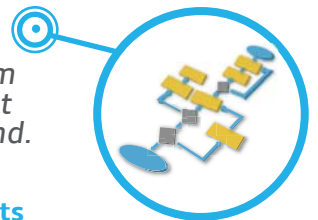

GE enerVista UR
IBM Maximo
Oracle®
PeopleSoft
SAP®
SEL Accelerator® 5010 & 5601
Sybase®

"Each operating company had their own testing procedures and we wanted to use PowerBase and RTS™ as the tools to bring the operating companies together. We now have all relays from all operating companies in one database and are presently working toward getting each operating company to use one common test database using RTS."

-Engineer, AmerenUE

Settings Workflow Automation

Trigger emails and notifications to inform engineering or field personnel of the next step to complete the settings task at hand.

Flexible Work Assignments

House work orders and work order tasks, complete with customizable statuses and the ability to sync with other work order applications or stand on its own without support from an external maintenance application.

Pseudo Devices

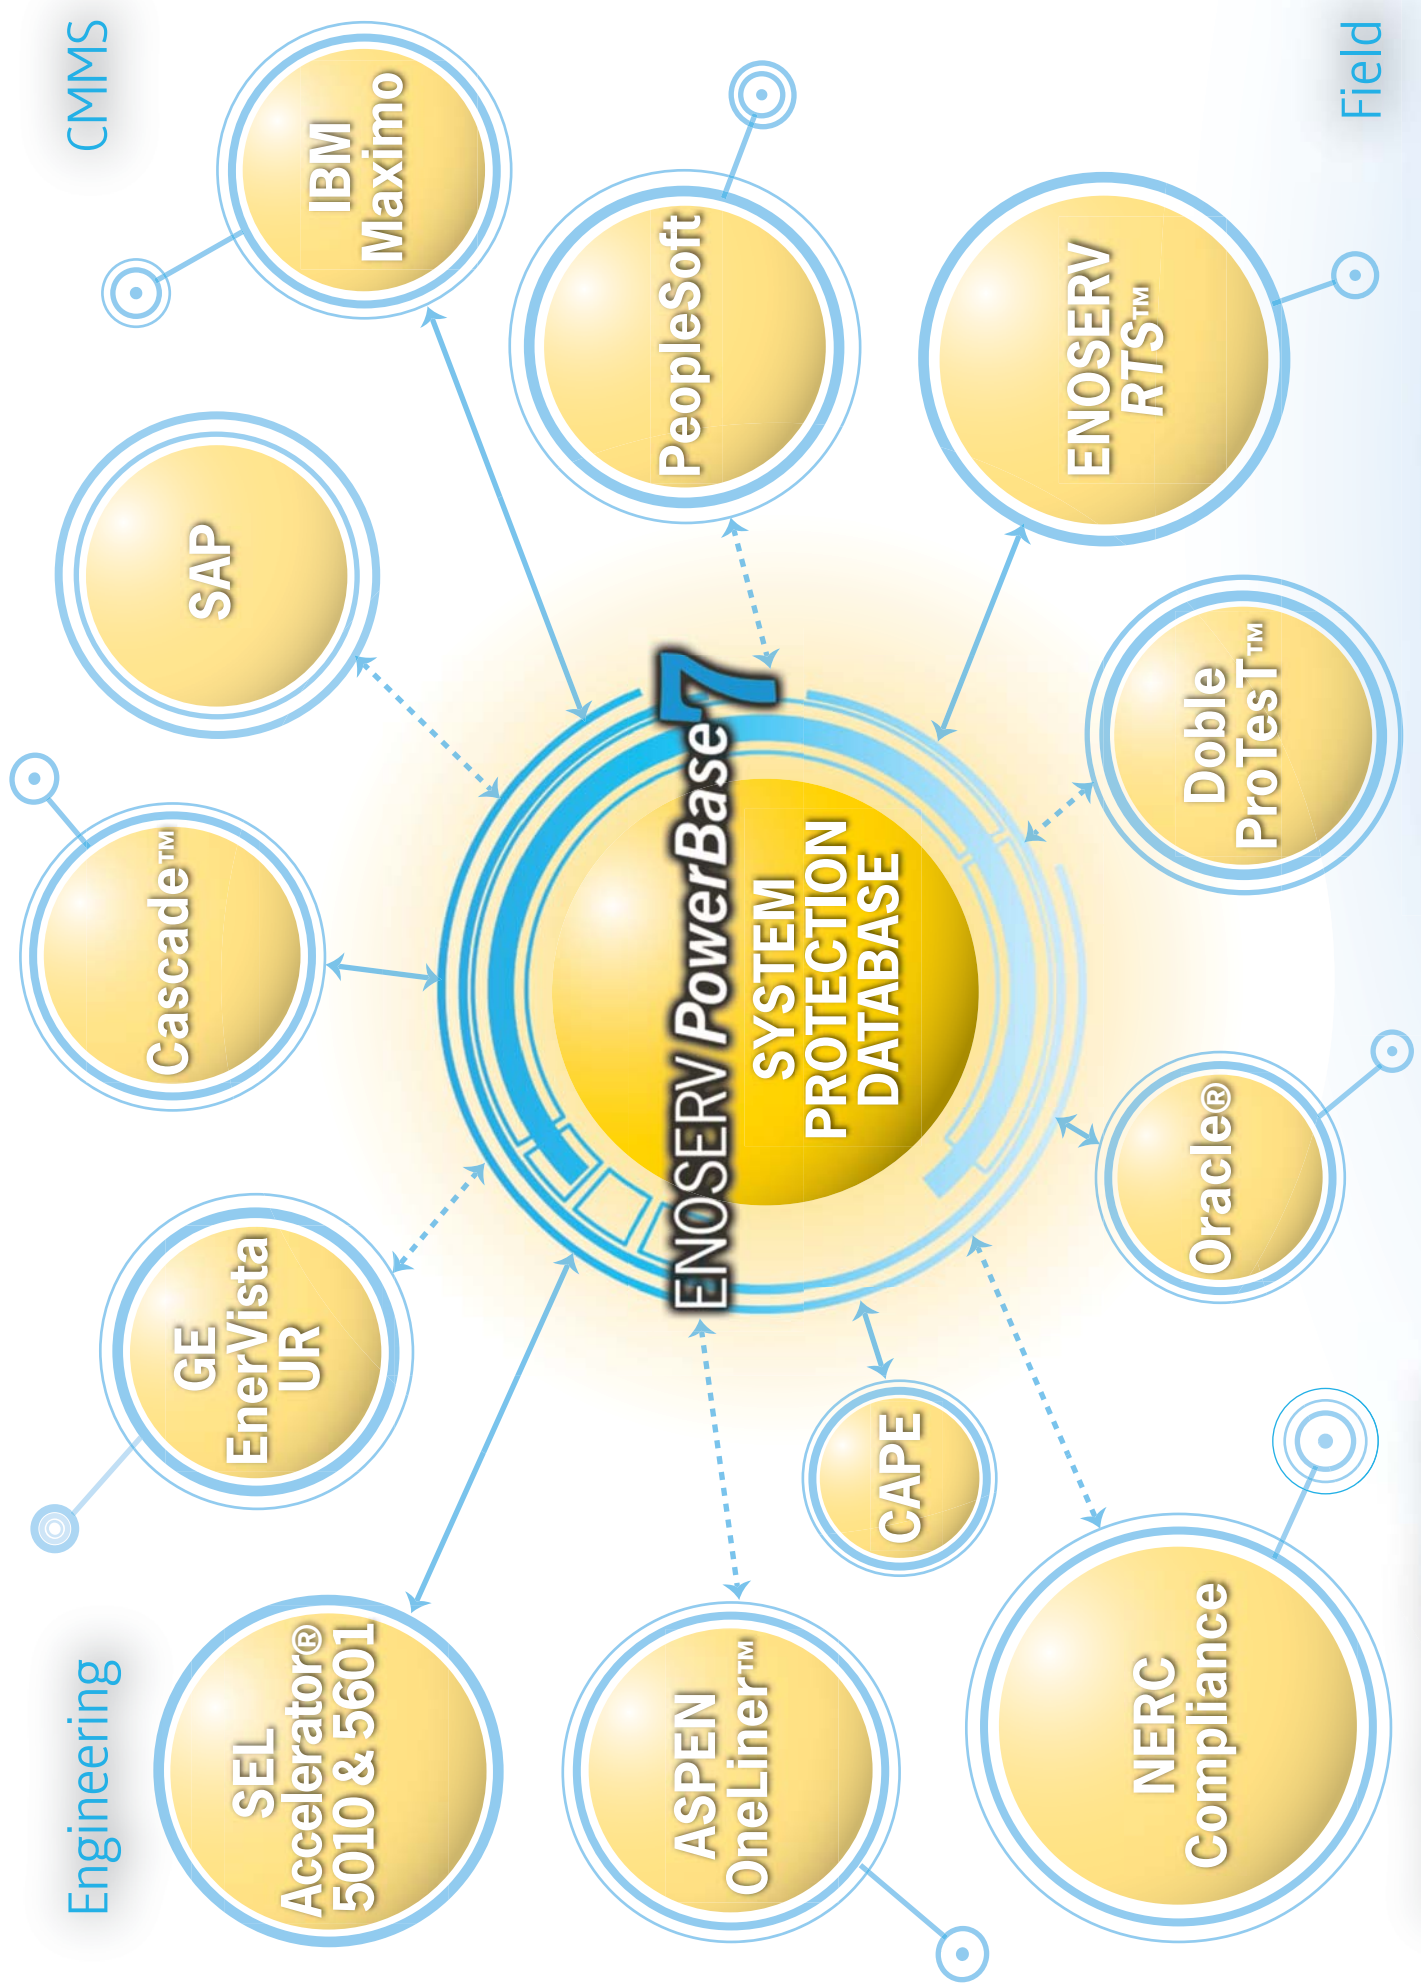

Store and show compliance-related test information on common equipment: CT/PT quantities, DC circuitry, and other components that are focused on a relay of interest.
